

LIFE

Learning In Florida's Environment

"I could never have taught all this subject matter in such an in-depth way." – Sarasota teacher

LIFE is a science-based environmental education enrichment that promotes knowledge, skills and stewardship for 4th- and 5th-grade students through hands-on field activities.

Students become wildlife biologists, ornithologists, entomologists, marine scientists, and horticulturalists for the day, through this award-winning, multi-agency collaborative effort!

In spring 2022:

- 246 grade 4 and 5 students from three schools participated in a 1-hour in-class session and a 3-hour field experience.
- 31% subject knowledge gain (from pre- to post-test results).
- 91% of students reported first-time visit to Shamrock or Lemon Bay park.

Field trips still open, March to May. FREE! (school provides transport)
